Summary

Senior Front End Engineer who owns the front end of Django products. I lead architecture and migration work, and I own the interface details that make checkout and content flows feel trustworthy. My recent work centers on Tailwind based UI systems, Django templated e commerce, admin driven content tools, and front end quality ownership including Cypress.

I use AI daily in front-end work for drafting, alternate approaches, efficiency checks, and current practice reminders. Nearly 20 years of experience is what lets me judge whether the output is the right shape for the product and the codebase.

Experience

Undercover Tourist

Senior Front End Engineer

May 2021 - Present | Remote

Hired as the company's first dedicated senior front-end engineer to modernize a Foundation based storefront on a Django codebase.

- Led the multi year migration from Foundation to Tailwind across page templates and Django HTML partials, including a custom Tailwind theme and configuration, while product and marketing work continued to ship.
- Own front-end delivery on a small engineering team, including product UI, marketing surfaces, and production interface issues. After becoming the sole front-end engineer, continued major product initiatives and assumed ownership of areas previously held by others.
- Built front-end and Django admin tools for high churn homepage and content experiences, including hero takeover flows and reusable content embed patterns, so operators could ship campaign changes without a front-end ticket for every variation.
- Took ownership of the Cypress suite, reworked and reorganized coverage for white label and vacation package flows, and treated automated testing of high risk customer journeys as part of front-end ownership.
- Partner with design and business stakeholders to turn Figma designs into production HTML, CSS, and JavaScript on a live ticket e commerce site.

LATICRETE International

Senior User Experience Developer

Feb 2020 - April 2021 | Bethany, CT

- Technical lead for a corporate website overhaul, including information architecture and responsive interfaces for web and mobile.
- Developed a component library to standardize delivery and increase feature velocity.
- Built React based web applications in a greenfield environment. This is legacy experience from before the current role and is not part of day to day work now.

Prudential Financial

Senior User Experience Developer

May 2017 - Feb 2020 | Hartford, CT

- Technical lead for interactive tools and a templated website builder.
- Managed development and testing cycles for new digital products and services.
- Partnered with designers on interactive prototypes and oversaw vendor relationships related to web application development and accessibility compliance.
- Led technical workshops to improve iterative design and development workflows.
- Received multiple Impact Awards for contributions beyond core responsibilities.

The Walker Group

User Experience Developer

Sep 2014 - Jan 2017 | Farmington, CT

- Built e commerce solutions for small business and national wholesale clients with a focus on performance and conversion.
- Led migration of an international consumer goods site to an open source platform to reduce cost and enable iterative UX improvements.
- Supported sales as a technical consultant.

Earlier roles

- Idea Agency - Front End Developer - 2013-2014
- University of Massachusetts Amherst - Bioinformatics Engineer - 2008-2011
